

SEVEN LEVEL INVERTER SYSTEMS

ABSTRACT:

Basic intention of developing this project is to provide a partial fulfillment of electricity to the remote place or villages where scarcity of electricity is there and load shedding is a common problem.

Our main goal of this project is to charge the battery during availability of power and to use the battery back for different purpose during power failure

This project is very much useful in rural electrification areas where scarcity of power is more. There are various benefits of rural electrification, such as in impoverished and undeveloped areas, small amounts of electricity can free large amounts of human time and labor.
